## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-28, drawn to a method for detecting a molecule at an interface, and a method for detecting a molecule in a medium, classified in class 436, subclass 164.
  - II. Claims 29-32, drawn to a method for determining the orientation of a molecular species within a planar surface, classified in class 356, subclass 601.
2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the method of invention I involves labeling the molecule with a second harmonic-active moiety and detecting the molecule at the interface and does not involve labeling the species, whereas invention II involves labeling the species and also requires measuring the polarization of second harmonic light. Invention II also requires the use of x-ray crystallography, which is not required by invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Art Unit: 1641

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
